IROC Import Overview

The IROC Import process allows a user to import Incident and Resource data from the Incident Resource Ordering Capability system (IROC) into the e-ISuite system.

The IROC Import function is used to populate a database with initial incident IROC data or to add new IROC data to an existing incident. There are several ways for an IROC database to be created in the e-ISuite system:

- The servicing dispatch center orders resources in IROC for an emerging incident; those resources can subsequently be used to create that incident in e-ISuite using the IROC Import Process.

OR

- An e-ISuite user creates a new incident in e-ISuite and assigns resources. If a dispatch center then creates an incident in IROC an IROC Import can be done for that incident, matching the e-ISuite incident data with the IROC Import data to make a complete resource record.

NOTE: After an Incident has been imported from IROC, click the **Refresh** icon to display the incident in the Incidents grid.

Rules for Importing, Excluding and Matching Resources:

Once a resource has been dealt with in an IROC Import, either by importing it or by excluding it, that resource will not display on any match screens in subsequent imports. If excluded, the resource can be imported later into the incident and will not display in any future matching sequence.

Resources will only display on the e-ISuite column "matching" screens, because data was manually entered for the resource prior to it being imported using the IROC Import function.

Match Resources contains the following menu items (IROC Import data is in left column, e-ISuite data is in the right column):

- **New Resources** - New resources in the IROC file that have not been matched to resources in the e-ISuite system display in the grid on the left. Potential matches to the new resources display in the grid on the right. Either manually match the resources to existing e-ISuite data or import the new resources without matching them to existing e-ISuite data.
- **Request Number and Name** (exact matches) - The resource could be unmatched manually on the potential match screen.

IROC Import

- **Request Number** - Request Numbers might be the same but the names are different. O-101 Smith, William would not match O-101 Smith, William E. These would have to be manually matched. Other data could also be mismatched in the resource record.
- **Resource Name and Item Name** - If the system finds any potential matches, they would have to be manually matched. This case occurs particularly when resources have been added to an incident prior to obtaining a Request #. Once resources have been given a Request # through IROC and the IROC file is imported to the incident, the system will display the Resource Name and Item Code in both columns. However, the IROC column will contain a Request # for the resource which can be used to match.
- **User Matched Resources** - Displays a list of resources that were manually matched. If needed, these can be unmatched on this tab.

Excluded Resources:

Once a resource is excluded, the only way to see that resource again is by using the "Import Excluded Resources" option. Even if that resource is actually in subsequent IROC Import Files, the system is not going to display it anywhere again except in the Excluded Resources area. If it is imported from there, it will not show up again.

Deleted Resources:

If a resource is imported into e-ISuite and is deleted from there, the resource will display in subsequent IROC Imports.

- [Import Excluded Resources](#)

Import IROC Incident Data

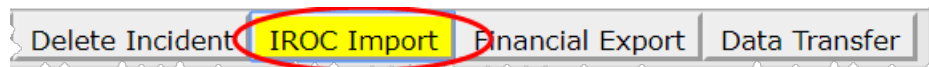

This section explains how to import an IROC data file:

1. From the Home page, click the **Incidents** button.

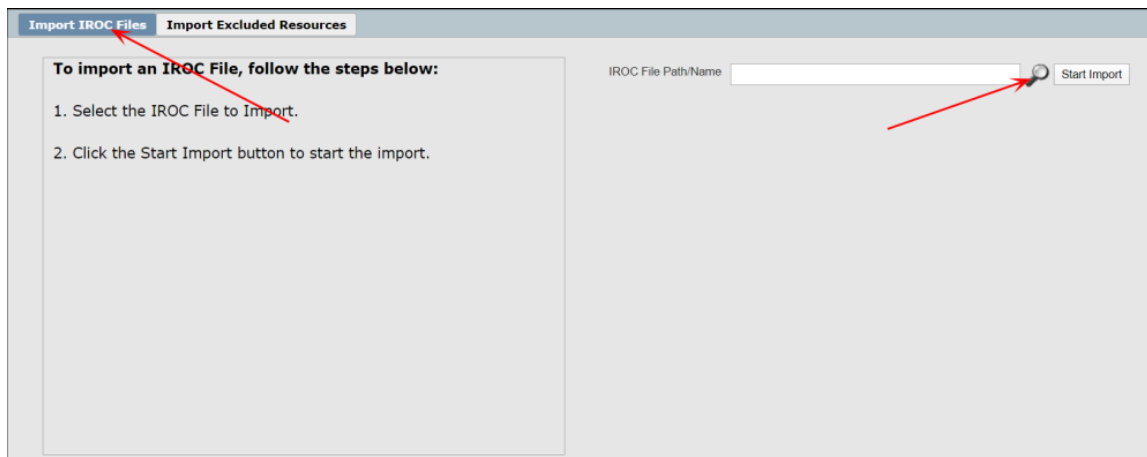

NOTE: The user account must have the Data Steward role and must download an IROC file from the IROC website using the current process prior to completing the next steps.

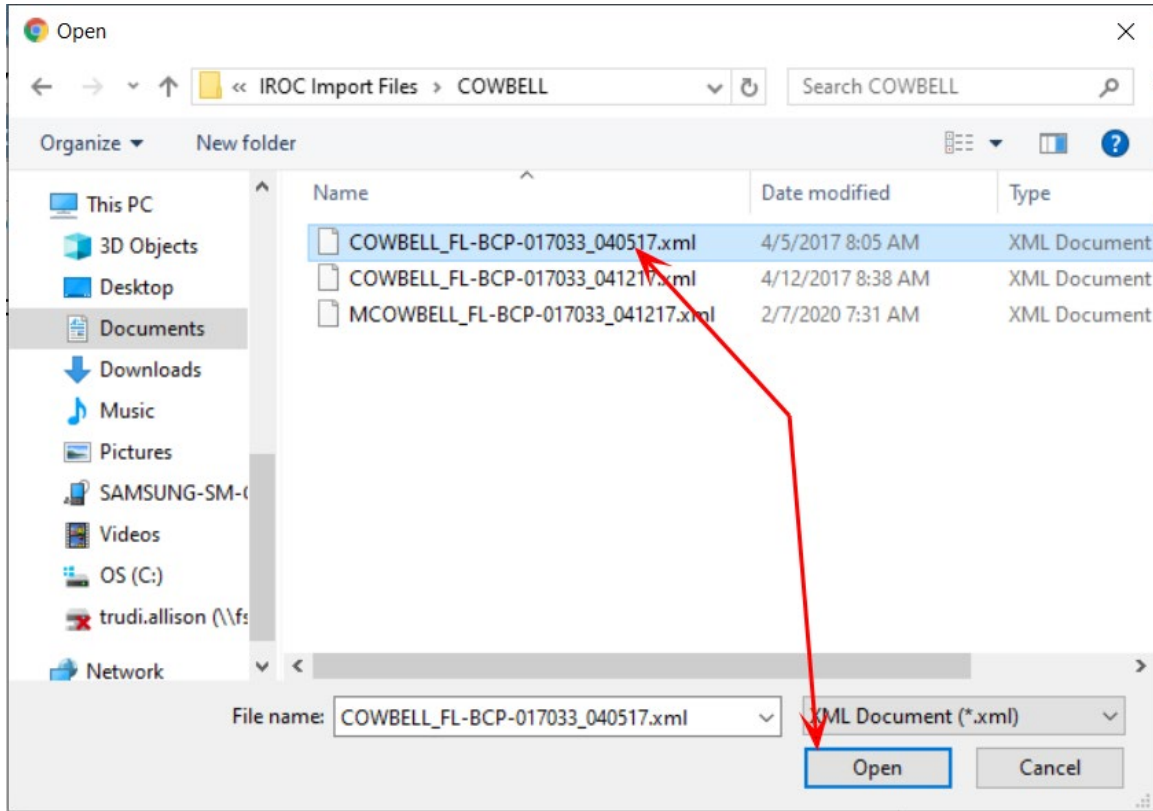

2. Click the **IROC Import** button to open the IROC Import page.

3. Select the **Import IROC Files** tab.
4. Click the Browse button next to the **IROC File Path/Name** field.

5. In the file browser window that opens, navigate to the directory where the IROC Import file is located.
6. Select the IROC Import file and click the **Open** button.

7. Click the **Start Import** button to begin the IROC file import process.

IROC Import

8. If the system detected a possible match between an IROC Incident and a manually entered e-ISuite Incident, the system will display a message indicating that a match was detected between the IROC Incident and e-ISuite Incident.

The screenshot shows the 'IROC Import' interface. At the top, there is a message: 'The system detected the following e-ISuite Incident as a match.' Below this, the IROC Incident Name is 'COWBELL' and the IROC Incident # is 'FL-BCP-017033'. The e-ISuite Incident Name is also 'COWBELL' and the e-ISuite Incident # is 'FL-BCP-017033'. The interface has four tabs: 'Match Resources', 'Resources', 'Data Conflicts', and 'Review and Complete'. The 'Resources' tab is selected. On the left, there is a table titled 'Resources in IROC File' with columns for Request #, Resource Name, and Agency Code. The table contains 17 rows of data. On the right, there is a table titled 'Exclude from Import' which is currently empty, showing 'No Rows To Show'. A red arrow points from the match message to the 'Resources' tab.

Request #	Resource Name	Agency Code
A-10	FIXED WING - AIR TACTICA...	USFS
A-11	FREQUENCY - AIR TO GND ...	
A-13	7/4656	
A-14	HELICOPTER - T2S - 205HQ...	USFS
A-15	FIXED WING - LEADPLANE/...	USFS
A-15.1	Lenmark, Paul	BLM
A-15.2	Chapman, Anthony James	BLM
A-15.3	Mascheroni, Andre	BLM
A-16	HELICOPTER - T1L - 718HT	USFS
A-16.3	Elliott, Tracy	USFS
A-16.4	Becker, Brandon M	USFS
A-17	HELICOPTER - T2S - 28HX	USFS
A-17.1	Clinton, Matthew V	USFS
A-17.2	Quinn, Joshua	USFS
A-17.3	Smith, Cameron D	USFS

9. If the system does not detect a match of a manually entered Incident in the e-ISuite system, the system displays a message indicating that no match was detected.

10. Click the **Resources** tab.

This screenshot is similar to the one above, showing the 'IROC Import' interface. The 'Resources' tab is highlighted with a red arrow. The match message and incident information are the same as in the previous screenshot. The 'Resources in IROC File' table is visible on the left, and the 'Exclude from Import' table is empty on the right.

IROC Import

11. Highlight Resources in IROC File (left grid) to be moved to Exclude From Import (right grid).
12. Shuttle Resources to the Exclude from Import list.

NOTE: Users should be careful when excluding primary resources with subordinates. If the primary resource is excluded, then all the subordinates of that resource should also be excluded. However, a subordinate resource can be excluded without its primary being excluded, as would be the case if a particular member of a crew resource did not report with the crew resource.

13. Click **Incident Jurisdiction**.
14. Choose a Jurisdiction from the drop down list.

15. If there were any conflicts with the data in the import file, a **Data Conflicts** tab displays. Click a conflict listed in the left grid.
16. Complete the conflict fields in the panel on the right side of the Data Conflicts tab and click the **Resolve Conflict** button. A checkmark will display in the **Resolved** column for those conflicts that were resolved.

NOTE: The conflict fields that display on the Data conflicts tab are based on the type of conflict that is selected.

17. If the conflict cannot be resolved, click the **Exclude Resource** button to exclude that resource from the import process.

Match by Request Number

1. Select the **Request Number** tab to view matches by Request Number only.
2. Review the matches to make sure they are correct. If a match is incorrect, select the resource in the grid and click the **No Match** button.

The screenshot shows the IROC Import application interface. At the top, it displays 'IROC Incident Information' for 'COWBELL' with incident number 'FL-BCP-017033'. A message states: 'The system detected the following e-ISuite Incident as a match.' with details for 'COWBELL' and incident number 'FL-BCP-017033'. Below this are navigation tabs: 'Match Resources', 'Resources', 'Data Conflicts', 'Review and Complete', and 'Cancel Import'. Under 'Review and Complete', there are sub-tabs: 'New Resources', 'Request Number and Name', 'Request Number' (highlighted with a red arrow), 'Resource Name and Item Name', and 'User Matches'. A text block explains: 'The following resources in the IROC Import file have Request Numbers that match existing resources in the e-ISuite System. The system has automatically matched these resources. Review the matches to make sure they are correct. If a match was made that was incorrect, select the resource in the grid and click the No Match button.' Below this is a table with columns: 'IROC Request #', 'IROC Name', 'IROC Agency Code', 'e-ISuite Request #', 'e-ISuite Name', and 'e-ISuite Agency C...'. The table contains one row: 'O-76', 'Phippen, Justin', 'NPS', 'O-76', 'PHIPPEN, JUSTINE', 'USFS'. At the bottom of the interface is a 'No Match' button.

Match by Resource Name and Item Name

1. Select the **Resource Name and Item Name** tab to view matches that were made based on the resource's Name and Item Name.
2. Review the matches to make sure they are correct. If a match is incorrect, select the resource in the grid and click the **No Match** button.
