

NFDRS Daily Summary Report

This is a simple beta version of a Power BI report with a table visual that can be used to quickly filter groups of stations and can provide simple decision support for recent observations and forecasts of NFDRS data.

- A. Click the dropdown menu in the slicer to select and filter stations by name.
- B. Click the dropdown menu in the slicer to select and filter stations by state.
- C. Drag the bar to scroll through station data in the table. (You can also use the trackbar on your mouse to scroll through the table.
- D. Select and filter data by date.
- E. Click the arrows to sort data in each column.
- F. Click the arrows to page between fuel moisture and fire danger tables.
- G. Note the average of each column in the last line, in bold.
